

Milestone 3

Project Description

The domain of our application would be product information regarding video games, as well as personal user data, such as product review, completion status, and ownership. This is modeled by the use of having a user account, in which video games can be added. Information about the video game is also stored, such as the main developers, publisher, and any DLC (downloadable content) it has. A user may add a review to the video game as well. As such, this program would be ideal for tracking what video games a person has played, wants to play, or is playing, all in one spot regardless of what platform that video game is on.

Timeline/Task Checklist

X	Task	Deadline	Assignment
	Improve on Milestone 2 by implementing TA feedback		Glen
	SQL Script	March 27	Chanaldy
	Project Description	March 27	Kat, Glen, Chanaldy
	Queries: Insert, Delete, Update	March 27	Kat
	Queries: Selection, Projection, Join, Division	March 27	Chanaldy
	Queries: Aggregation with Group By, Having and Nested Aggregation with Group By	March 27	Glen
	Screenshots of Queries	March 27	Glen
	GUI design/framework	March 27	Kat, Glen, Chanaldy
	GUI implementation	April 3	Kat, Glen, Chanaldy
